

Plant adaptation advantage pockets—Copy onto transparency.

**Protection from
Predators
and Environment**

**Reproduction and
Seed Dispersal**

**Prevents Water
or Energy Loss**

Plant adaptation advantage cards

Seeds covered with hooks stick to animals and then disperse.

Plant produces chemical irritating to the skin.

Structures on seeds enable them to drift with the wind.

Thorns on stems help prevent plants from being harmed.

Trees lose leaves during changes of seasons or harsh conditions.

Waxy cuticle (covering) slows water loss.

Animal adaptation advantage cards

	migrating	prevents loss of body moisture and provides protection
large bill with pouch of skin	spots that resemble eyes	to find food and reproduce in a more favorable environment
small ears close to head	camouflage—blends into their surroundings	discourages predators
